Virulent Newcastle Disease (VND) in backyard poultry and avian in San Bernardino and Los Angeles Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (VND) in chickens in Los Angeles and San Bernardino Counties.

- On 05/18/18, CDFA detected VND in a small flock of backyard exhibition chickens in Los Angeles County, and confirmed by the United States Department of Agriculture's (USDA) Animal and Plant Health Inspection Service (APHIS).
- CDFA is the state lead on the incident, with support from Cal OES and in collaboration with USDA.
- USDA Incident Management Teams continue to rotate every two weeks to facilitate the management and support the response to the incident.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus. Commercial surveillance actively continue to work with commercial premises in the surveillance zones on biosecurity to help protect their poultry from VND.
- Backyard Surveillance (education and outreach) continues in the surveillance zones.

Declaration

- On 06/26/18 at 1840 hours, the California State Warning Center (CSWC) received a report regarding Virulent Newcastle Disease (VND) from the California Department of Food and Agriculture (CDFA). CDFA has declared an Agricultural Emergency to provide the department the authority to activate internal emergency provisions and to expedite the request for permits and waivers required to perform designated activities under an emergency basis.

Activations

- San Bernardino Operational Area (OA) EOC is activated to Level 3 (lowest level) and will continue to monitor the incident.

Deployments

- One (1) Cal OES Southern Region Senior Emergency Services Coordinator (ESC) is deployed to the ICP as an AREP (Agency Representative). Operational Period of 0700-1900 hours.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** HIGH RISK Today-Midday Sacramento Valley/Foothills and Mid Coast to Mendocino PSAs for Moderately Strong, Gusty N-NE wind/low Relative Humidity ***

High pressure to our west will produce hot, dry, dry and breezy weather through Sunday. N-NE winds will gust to 30-40 mph and locally higher from the western Cascade-Sierra slopes to the coast this morning. The winds will continue at slightly lighter speeds this afternoon through Sunday morning. Minimum afternoon Relative Humidity will be 5-15% today and humidity will only recover to 20-30% in these areas tonight. Outside of areas near the immediate coast temperatures will be 8-12 degrees above normal. The marine layer is currently less than 1000 ft deep and is only along the immediate coast. Sunday will start off the same as today, but by midday the northerly winds will diminish and SW-NW sea breeze winds will begin to push cool humid marine air inland. N-NE winds will continue at lighter speeds throughout the Sacramento Valley and surrounding foothills Sunday afternoon through midday Monday, and another night of poor Relative Humidity recovery can be expected there tonight. There is a High Risk of significant fires in the Sacramento Valley and surrounding foothills through Sunday, and in the Mid Coast as far west as Hwy 101 today and only in eastern areas (as far west as Lake and Napa counties) on Sunday. The higher terrain of the North Coast will have a few areas of elevated fire potential due to gusty offshore winds and low Relative Humidity on through Monday. Coastal zones see the benefits of cooler temperatures and higher humidity from a deeper marine layer that moves farther inland later Sunday and Monday.

A low pressure trough will set up over the west coast beginning late Monday and remain in place all week. During the middle of the week it may produce strong enough winds east of the Cascade-Sierra crest to create High Risk conditions due to strong winds and low Relative Humidity.

SOUTHERN CALIFORNIA

High pressure centered off the Northern California Coast will cause temperatures to warm over interior portions of the region this weekend, with upper 70s and 80s across the mountains and 90s to 102 in the inland valleys. A deep marine layer will keep coastal valley temperatures around 5 degrees below normal through this weekend, with upper 70s and 80s. Isolated afternoon thunderstorms will be possible over the Sierra Crest Sunday. A trough will drop down the West Coast bringing a cooling trend to interior portions of the region Monday through the middle of next week. This trough will also bring westerly winds of 20 to 30 mph with gusts to 50 mph to the mountain ridges and desert passes Monday afternoon through Wednesday evening. Minimum humidity will be mainly between 15% and 30% away from the coastal areas through the middle of next week, except there will be single digits and teens across the deserts. Significant warming and drying will take place late next week as strong high pressure over the eastern part of the country moves westward.
